**SPEEDGAUGE**®
Speeding Matters - EVERYWHERE

Keeping *YOU* safe on the road!

We are a driver safety performance and management company, partnered with your company's GPS service to provide reports and analytics to keep you and everybody else safe on the road.

With the data collected by your company's existing GPS solution, we create reports to identify speeding trends so that you and your managers can reduce speeding and keep you and everybody else safe on the road.

We do this because

- Your safety is #1
- Safe drivers should be rewarded
- All drivers should have the resources they need to stay safe on the road

How do you know the speed limit?
We maintain a database of posted speed limits from around the world, which we keep updated around the clock according to updates from federal, state and local agencies, and from feedback from thousands of drivers like you!

What if your speed limit is wrong?
Send us an update! Speed limits change, and if you spot one that's out of date, please let your managers know and they will make sure that it's updated ASAP.

How do you know how fast I was going?
We work with the speed and location information that is already being collected by your GPS provider - they collect the speed from your ECM or calculate it using GPS readings. Your speed is *not* calculated or determined by SpeedGauge.

I wasn't driving here!
If you believe that the speed or location information is incorrect, your manager can work with your GPS provider to see if the unit in your vehicle needs to be serviced or reset.

How long does each ping last?
GPS observation pings do not have a duration - they are a single moment in time. We won't know how *long* a vehicle was speeding, but we *do* know how *often*, and a vehicle that is speeding on 20% of pings is certainly speeding more and longer than a vehicle that speeds on 2% of pings.
